

The trends of average of max_mtps and max_teps_stderr_base for nnode. For pane Max_teps_stderr_base: Size shows max_teps_stderr_len. Details are shown for machine. For pane Average of max_mtps: The marks are labeled by machine. The data is filtered on tag, Exclusions (id,machine,nnode,tag), nworkers, nnode, nnode,flushticks, nnode,nworkers, problem and tree. The tag filter keeps uts#pal and uts#xmt. The Exclusions (id,machine,nnode,tag) filter specifies a set. The nworkers filter keeps no members. The nnode filter keeps 2, 4, 8, 12 and 16. The nnode,flushticks filter specifies a set. The nnode,nworkers filter specifies a set. The problem filter keeps utsT1L. The tree filter keeps T1L. The view is filtered on machine, which keeps XMT, XMT, Grappa and Grappa.
